Reporting, and Validation**

Module 3: Global Vaccination

July 2010

**Becky Ure, RN, BSN, Med
Project Coordinator**

Agenda

- New measure set included in the *Specifications Manual, Version 3.2*
- Implications for the near future
- Assessment of current processes
- Planning for modification of existing (or implementation of new) inpatient vaccination processes

Global Vaccination Measures

- Officially titled “Prevention National Hospital Quality Core Measures”
- Two primary measures:
 - Prev-Imm-1: Pneumococcal Immunization
 - Prev-Imm-2: Influenza Immunization
- Published as “informational only” in the *Specifications Manual*, version 3.2

3

Information for Health Care Improvement

Global Vaccination Measures

Why worry about this now if it is “informational only”???

- CMS is proposing adding these measures for the FY 2014 APU payment determination
- Data submission would begin with
[January 1, 2012 discharges](#)
- This is only about 18 months down the road...

4

Information for Health Care Improvement

Global Vaccination Measures

Initial Patient Populations will be composed of two overlapping groups

1. Age
 - 50 years and older
 - 6 months through 18 years of age
 - Length of stay \leq 120 days

5

Information for Health Care Improvement

FMQAI HSAG

Global Vaccination Measures

Initial Patient Populations, cont.

2. High Risk
 - 6 months through 65 years of age and
 - ICD-9-CM Principal or Other Diagnosis Codes:
 - Chronic obstructive pulmonary disease (COPD)
 - Human Immunodeficiency virus (HIV)
 - End stage renal disease (ESRD)
 - Nephrotic syndrome
 - Heart failure (HF)
 - Asthma
 - Diabetes
 - Asplenia
 - Pregnancy
 - Length of stay \leq 120 days

6

Information for Health Care Improvement

FMQAI HSAG

Global Vaccination Measures

Prev-Imm-1: Pneumococcal Immunization

Set Measure ID #	Measure Short Name
Prev-Imm-1a	Pneumococcal Immunization – Overall Rate
Prev-Imm-1b	Pneumococcal Immunization – Age 65 and greater
Prev-Imm-1c	Pneumococcal Immunization – High Risk Populations (Age 5 through 64 years)
Prev-Imm-1d	Pneumococcal Immunization – Received During Hospitalization
Prev-Imm-1e	Pneumococcal Immunization – Received in Past
Prev-Imm-1f	Pneumococcal Immunization – Patient Refused
Prev-Imm-1g	Pneumococcal Immunization – Medical Contraindications

7

Global Vaccination Measures

Prev-Imm-2: Influenza Immunization

Set Measure ID #	Measure Short Name
Prev-Imm-2a	Influenza Immunization – Overall Rate
Prev-Imm-2b	Influenza Immunization – Age 6 months to 18 years and greater than 50 years
Prev-Imm-2c	Influenza Immunization – High Risk Populations (Age 19 through 49 years)
Prev-Imm-2d	Influenza Immunization – Received During Hospitalization
Prev-Imm-2e	Influenza Immunization – Received in Past
Prev-Imm-2f	Influenza Immunization – Patient Refused
Prev-Imm-2g	Influenza Immunization – Medical Contraindications

8

Global Vaccination Measures

***If you were to start reporting
all of these measures now,
how ready would you be?***

9

Information for Health Care Improvement

FMQAI HSAG

Global Vaccination Measures

Self-Assessment Questions

- What are your current rates for PN-2 (Pneumococcal Vaccination) and PN-7 (Influenza Vaccination)?
- Does your current process depend on individual physician orders or have you implemented nursing standing orders?
- Are you only assessing and vaccinating your pneumonia patients or *all* high risk patients?

10

Information for Health Care Improvement

FMQAI HSAG

Global Vaccination Measures

Self-Assessment Questions

- Do you vaccinate your pediatric patients?
- What percentage of your patients refuse vaccination without a valid reason for doing so?
- What percentage of your hospital staff received influenza vaccine this past year?
- How long does it take your facility to implement or modify a process as involved as vaccinating all high-risk inpatients?

11

Information for Health Care Improvement

FMQAI **HSAG**

Global Vaccination Measures

Recommendations

- Consider implementation of a nursing standing order protocol if you don't already have one
 - Standing order protocols are recommended by numerous professional organizations such as the Advisory Committee on Immunization Practices (ACIP), the Infectious Diseases Society of America (IDSA), and the American Thoracic Society (ATS)

12

Information for Health Care Improvement

FMQAI **HSAG**

Global Vaccination Measures

Recommendations

- Standing order protocols, cont.
 - The safety of these vaccines is well documented, and nurses administer medications on a daily basis that have *much* greater potential for adverse reactions
 - Nurses can easily and quickly screen for high-risk status and vaccination history and activate the standing order protocol as part of their initial nursing assessment

13

Information for Health Care Improvement

FMQAI HSAG

Global Vaccination Measures

Recommendations

- Incorporate inpatient vaccination information into mandatory annual staff education activities:
 - Influenza and pneumococcal disease and the benefits of vaccination (including local statistics)
 - Safety and efficacy of these vaccines
 - Identification of high-risk individuals who should be vaccinated (*Their risk from the disease is much greater than any potential risk from the vaccine!*)
 - Contraindications and precautions
 - Administration and documentation
