

# Cardiac Health PDSA

## Smoking Cessation

### Step 1

Run a smoking status report for all patients to see how many patients currently smoke. This is your baseline.

### Step 2

Implement an intervention process. Set a goal, i.e. smoking cessation plan created for patients who smoke.

### Step 3

Review smoking status at determined dates to assess actual rate of improvement: subtract baseline from new report.

### Step 4

Assess improvements and change plan accordingly. More than one cycle may be necessary to reach your goal.
