

About Quality Innovation Network-Quality Improvement Organizations (QIN-QIOs)

The Centers for Medicare & Medicaid Services QIO Program is an integral part of the U.S. Department of Health and Human Services' (DHHS) National Quality Strategy and is one of the largest federal programs dedicated to improving health quality at the community level. This network of experts in quality improvement works in partnership with patients and families, providers, communities, and healthcare stakeholders in every setting in which care is delivered. QIN-QIOs assist patients and families, providers, and communities to: make care safer, support active engagement and self-management of chronic conditions, eliminate health disparities, promote best practices for healthy living, deliver improved access to care, and make care affordable.

Improving Cardiac Health, Preventing Stroke, and Reducing Cardiac Disparities

Heart disease and stroke are, respectively, the first- and fourth-leading causes of death in the United States for all demographic groups, according to the Centers for Disease Control and Prevention (CDC). The disproportionate impact of these diseases on racial and ethnic minorities is a key target of QIN-QIO work with Medicare beneficiaries and their families, providers, and community stakeholders.

In alignment with the DHHS Million Hearts® goal to prevent 1 million heart attacks and strokes by 2017, QIN-QIOs focus on improving the ABCS of cardiac risk reduction (Aspirin therapy when appropriate, Blood pressure control, Cholesterol management, and Smoking screening and cessation). The Million Hearts® initiative also created a priority focus on blood pressure measurement and control. High blood pressure has long been considered a "silent killer" in that many people do not demonstrate signs and/or symptoms of the disease. As part of this national effort, the QIO Program is targeting blood pressure measurement and control as essential to preventing heart attacks and strokes and decreasing the number of Americans who die unnecessarily as a result of untreated hypertension.

Reducing Disparities in Diabetes Care

In the United States, nearly one-third of adults 65 years and older have diabetes, according to the National Institutes of Health (NIH, 2011). Diabetes is the most common cause of blindness, kidney failure, and amputations in adults and a leading cause of heart disease and stroke.

Continued

As of August 1, 2014, the Centers for Medicare & Medicaid Services (CMS) has established a new functional structure for the Quality Improvement Organization (QIO) Program that delivers program value to patients and families, maximizes learning and collaboration for improving care, and supports the spread and sustainment of effective new practices and models of care. Under the new structure, CMS has separated case review from quality improvement work, with both segments of the QIO Program serving all 50 states and three territories.

Two Beneficiary and Family Centered Care-QIOs review quality of care concerns and appeals, while 14 Quality Innovation Network-QIOs work with providers and communities on data-driven quality initiatives to improve patient safety, reduce harm, engage patients and families, and improve clinical care at the community level. Improving the Health Status of Communities:

Effective Prevention and Treatment of Chronic Disease

The CDC reports that African Americans are 1.4 to 2.2 times more likely to have diabetes than Caucasians, that people who identify as Hispanic/Latino have a higher prevalence of diabetes than non-Hispanic populations, and that the prevalence of diabetes among American Indians/Native Americans is 2.8 times the overall rate. By targeting these populations and Medicare beneficiaries of any ethnicity living in rural areas, QIN-QIOs—through the Everyone With Diabetes Counts program—help patients and families, providers, and communities address this serious chronic condition and its disproportionate effects on racial/ethnic and rural populations.

QIN-QIOs work with familiar and trusted people and organizations within communities to provide diabetes self-management education where it is convenient (e.g., holding classes at a local senior center). This community-based approach encourages participation and provides a structure to support people in their ongoing commitment to self-management. By working with healthcare providers, practitioners, certified diabetes educators, and community health workers, people with diabetes can acquire the knowledge and skills necessary to improve the quality of their lives by preventing or lessening the severity of complications resulting from diabetes.

Coordinating Prevention Through Health Information Technology

Effective use of health information technology (health IT) decreases paperwork, improves access to medical records, and facilitates care coordination among providers. QIN-QIOs have many years of experience working with physician practices and Regional Extension Centers (RECs) to support the use of certified electronic health record (EHR) technology as a tool for better patient care. Currently, QIN-QIOs are providing targeted technical assistance to physicians, acute care hospitals, and critical access hospitals that qualify for the Medicare EHR Incentive Program and have significant barriers to using EHR functionality for quality improvement. QIN-QIOs continue to collaborate with RECs to increase the number of practices that employ an IT-enabled care management approach for primary care prevention and early diagnosis. Examples of this approach include using EHR functionalities, like registries, to identify patients who need a mammogram or other preventive services. By participating in QIN-QIO health IT initiatives, physicians also will be well-positioned for future payment incentives linked to clinical data reporting.

Learn More and Become Involved

The QIO Program invites all providers, community stakeholders, Medicare beneficiaries, family members, and caregivers to become partners in its improvement initiatives. To get involved, contact Health Services Advisory Group, Inc.
